Stickers For Days Site Update

Tuesday, November 17, 2026. Prepared by Nathan Berg, Suubi Media.

Status: All eight changes are live on stickersfordays.com. Updated Nov 18: the Matte or Gloss fix is live too.

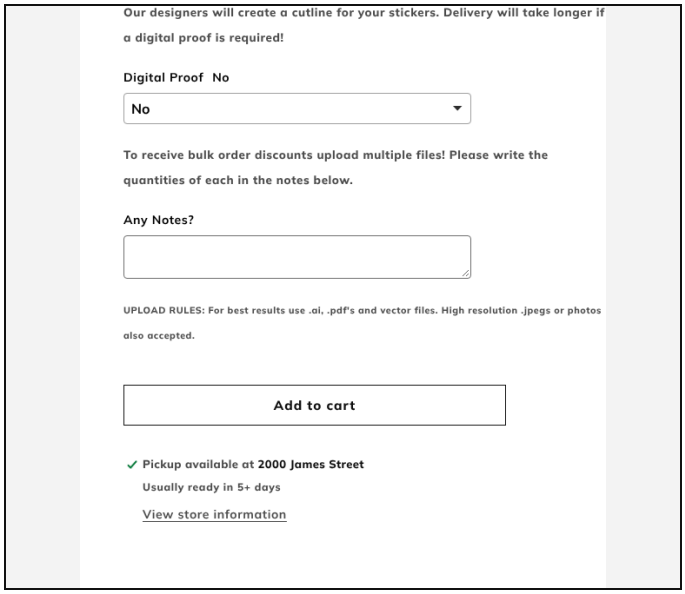

What changed

	WHAT	IT WAS	NOW IT IS
1	**Art upload button**	Missing on product pages after the Shopify theme update. Orders could come in with no art.	Back on all 7 product pages. Add to cart is blocked until art is uploaded.
2	**Cart page**	Old fonts, square black buttons, plain white page.	New look. Bold headings, teal Check Out button, total in a bordered card.
3	**Older pages**	Products, Stickers, Transfer Vinyl, Vehicle Graphics, Signage, Design Services and Contact still had the old design.	All match the new design. Same words and photos, new fonts, colors, cards and buttons.
4	**Product pages, lower half**	Digital Proof, Any Notes, upload and Add to Cart used the old styling.	Matches the price finder above it. Add to Cart is the teal main button.
5	**Product tiles**	Tiles on the Products page did not click through. Graphic Design led to a missing page.	Every tile opens its page. Graphic Design opens Design Services.
6	**Order Here menu link**	Opened the old Products tile page.	Opens the sticker order page, on desktop and phone.
7	**Sticker Studio art**	Customers designed in the Studio, then had to upload the same art again to order.	The art and a proof travel with the order. Stored by the store's own upload app. One upload, not two.
8	**Leftover old pages**	16 pages from the original site were still up.	Hidden, not deleted. Old links forward to the new pages.

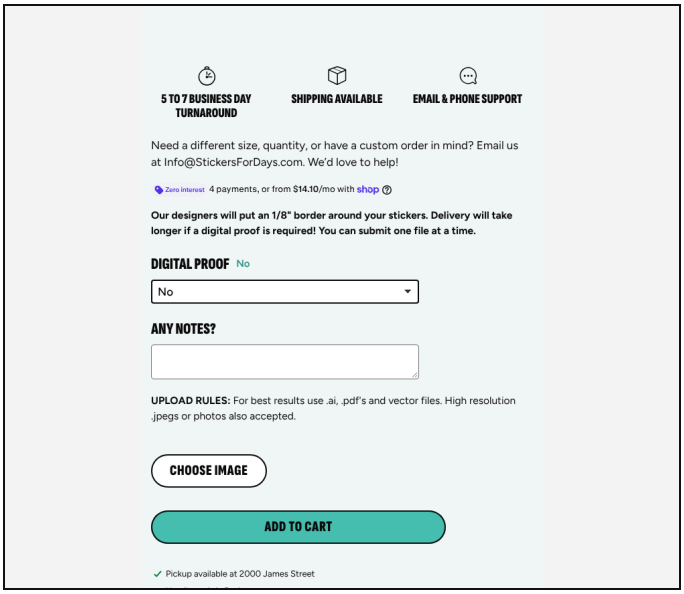

The homepage was not changed. It was compared before and after.

1 and 4. Order form on product pages

IT WAS

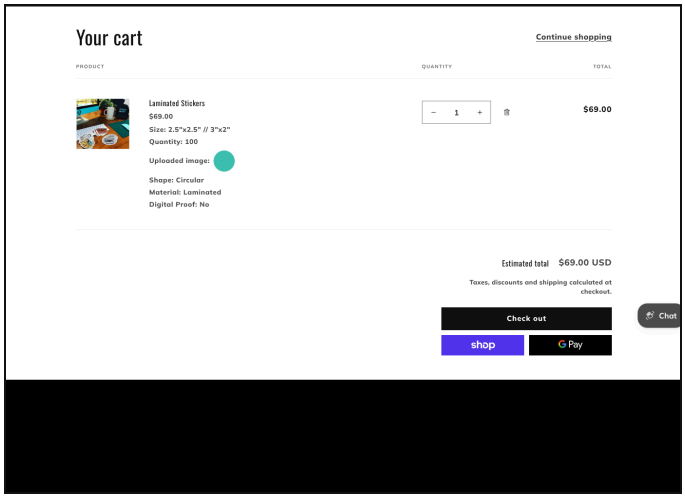

NOW IT IS

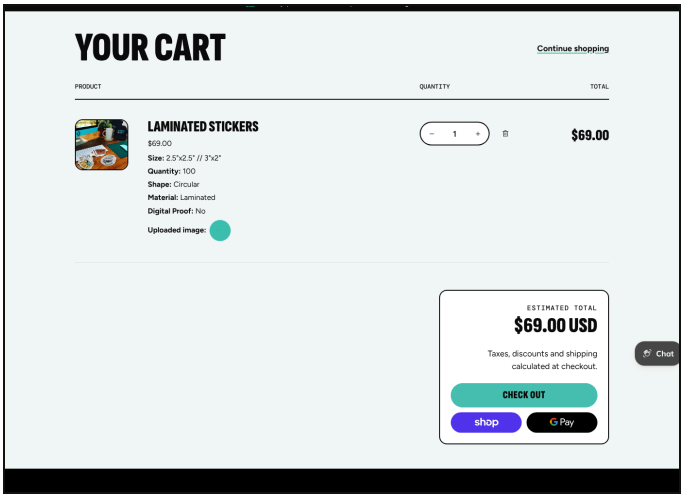

Before, there was no way to upload art. Now the Choose Image button is back and the form matches the new design.

2. Cart page

IT WAS

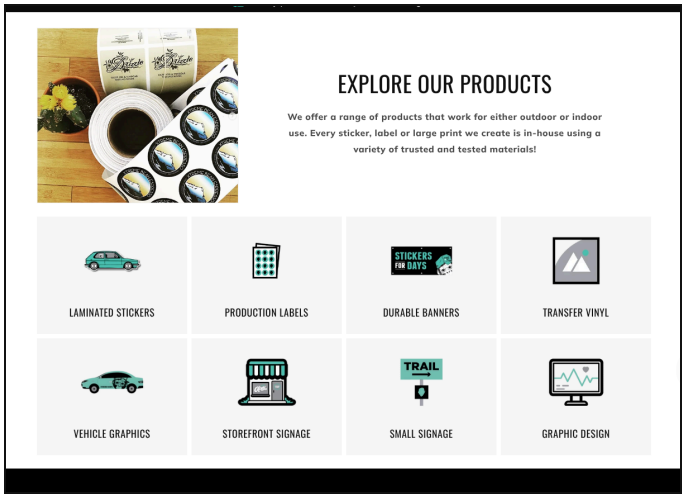

NOW IT IS

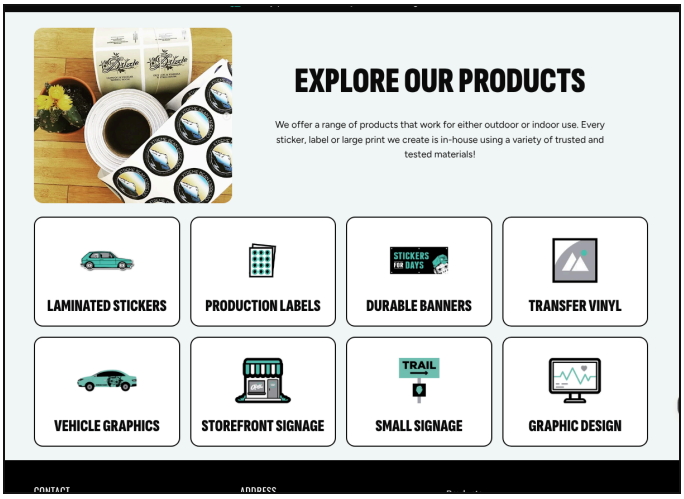

Same cart, same steps. The uploaded art shows on the order line.

3 and 5. Older pages and product tiles

IT WAS

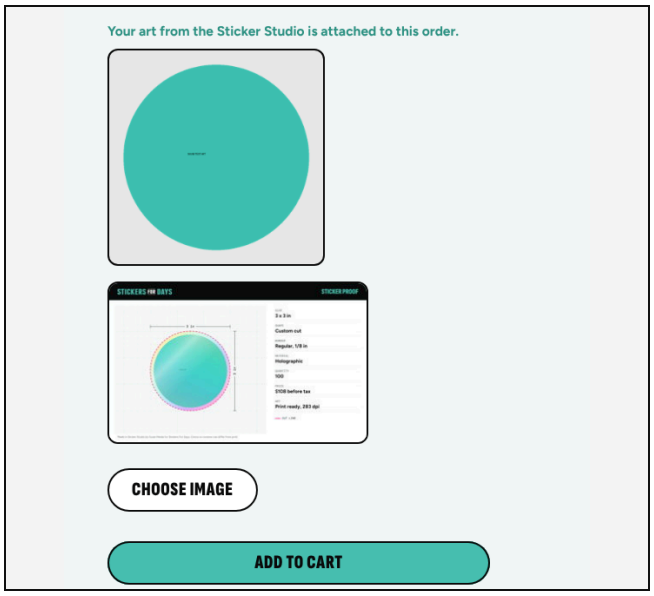

NOW IT IS

The Products page is shown. The other older pages got the same treatment, and each tile now clicks through.

7. Sticker Studio art goes with the order

NOW IT IS

How it works

- The customer adds art in the Studio and taps Order.
- The product page opens with the size, material and cut already picked.
- The art and a proof are already attached. No second upload.
- Both files show on the cart and on the order in Shopify.

This is live. Customers who skip the Studio upload on the product page as normal.

Still to test

- **A real paid order.** One small order with a card, then refund it. The free test order skipped the card step.
- **An order with art.** Place one and confirm the file opens from the order in Shopify.
- **A Studio order.** Design a sticker in the Studio, order it, and confirm the art and proof arrive.

Found along the way

MATTE OR GLOSS ON ORDERS

Fixed and published Nov 18. Orders now show Material as Matte or Gloss, and the sticker type on its own line called Sticker type. Tested on the live site.

TRACKING AND SEARCH CODE

The Shopify theme update also removed Google Tag Manager, two search listing helpers and the old price calculator script. Google Analytics and Google Ads still load. These can be put back.

TWO FOOTER LINKS

Fixed. Stickers and Custom Graphic Design used to open missing pages. They now forward to the right ones.

Housekeeping

- Test order #1955 is cancelled.
- The SUUBI test code is used up and no longer works.
- A few test files from checking sit in the upload app: a teal circle and some Studio proofs. Safe to ignore or delete.
- Orders show Laminated Stickers or Holographic Stickers as the product. The exact type, such as Clear or Reflective, is on the Sticker type line.
